Zebra® ZD500R™ UHF RFID Printer

Advanced Features in One Small and Easy-to-Use Device

SIZED RIGHT

Perfect for applications where space is at a premium, the ZD500R offers a small footprint. The clamshell design minimizes door swing when changing media so the printer can be used in space-constrained locations.
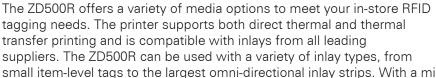

EASY TO SET UP AND MANAGE

The ZD500R makes set up a breeze. The device features quick loading and automatic RFID calibration. The ZD500R also uses Link-OS™— Zebra's new and innovative software platform that enhances the capabilities of the printer, making it significantly easier to manage and integrate into global operations. An NFC Infotag lets you pair devices with just a tap and eases troubleshooting.

EASY TO USE

With an intuitive user interface, there is little training required to operate the ZD500R. The large LCD and simplified menu structure makes operation simple.

MEDIA FLEXIBILITY

The ZD500R offers a variety of media options to meet your in-store RFID tagging needs. The printer supports both direct thermal and thermal transfer printing and is compatible with inlays from all leading suppliers. The ZD500R can be used with a variety of inlay types, from small item-level tags to the largest omni-directional inlay strips. With a minimum inlay pitch of 16 mm, the ZD500R enables lower media cost, less media waste and fewer roll changes.

COMPATIBLE WITH YOUR CURRENT TECHNOLOGY, BUT FUTURE PROOFED FOR TOMORROW'S APPLICATIONS

Since it is built with the same innovative technology as Zebra's industry-leading RFID printer/encoders, existing applications can be easily adapted for use with the ZD500R. The ZD500R supports next generation inlays and offers 802.11 a/b/g/n wireless and Bluetooth® connectivity.

ZEBRA MEETS ALL OF YOUR RFID PRINTING AND ENCODING NEEDS

The ZD500R is the newest addition to Zebra's complete line of RFID printers. From the heavy-duty R110Xi4™ to the lightweight handheld RP4T™, Zebra offers a solution for every RFID application.
